

For peer-reviewed scholarly publications (such as journal articles) resulting from FWF projects approved before 1 January 2021, the following Open Access policy applies:

Open Access to peer-reviewed Publications

The FWF requires and supports all project leaders and project staff members to make their peer-reviewed publications freely available through the Internet, if they result in full or in part from projects funded by the FWF. Three options are available for open access to peer-reviewed publications:

1) Gold Open Access:

Open access to publications is ensured through direct publication in an open access venue. The publisher should apply the highest standards of [HowOpenIsIt](#). In any case, however, the publication must be made available using the [Creative Commons Attribution CC BY](#) licence (or an equivalent open licence). Journals must be listed in the [Directory of Open Access Journals \(DOAJ\)](#).¹

Costs: Gold Open Access publishing may involve an article processing charge (APC) to the publisher (see Section III, Publication Costs).

2) Hybrid Open Access:

Open access to publications can be ensured through direct open access publication in a subscription venue. The publisher should apply the highest standards of [HowOpenIsIt](#). In any case, however, the publication must be made available using the [Creative Commons Attribution CC BY](#) licence (or an equivalent open licence). Journals must be listed in the in [Web of Science](#) or [Scopus](#).

Costs: Hybrid Open Access publishing may involve an article processing charge (APC) to the publisher. The costs of open access to single contributions in a subscription venue ([Hybrid Open Access](#)), see Section III, Publication Costs.

3) Green Open Access:

Open access to publications can also be ensured by self-deposition of the author's accepted manuscript (after peer review but prior to the publisher's copy editing and production) in any sustainable subject or institutional repository. If there is a restricted period during which such archiving is not permitted, the period should not be longer than 12 months. If the embargo period is longer, please choose an alternative publishing venue. For publisher's self-archiving policies, please consult the [SHERPA/RoMEO](#) database.

II. Archiving

Notwithstanding the option selected (see Section I), publications must be deposited (by the author or by the publisher) in repositories with sustainable access at the time of publication. These can be either subject or institutional repositories (see [Directory of Open Access Repositories](#)²).

If the publications are in the **life sciences** (or related topics), authors are required to make their peer-reviewed papers freely available, subject to the embargo period, in the full-text repository [Europe PMC](#). An e-mail will be sent by Europe PMC to principal investigators affected by this policy. For more information, please consult the [guidelines](#) (PDF, 202KB).

¹ If an open access journal has been founded very recently (in the last 12 months) and is therefore not yet registered in the DOAJ, it must be clear from the journal's website that the DOAJ criteria are fulfilled.

² If an embargo period must be applied, most repositories offer settings so that the publication is not made openly accessible until the embargo period has expired.

III. Publication Costs

Costs for the open-access publishing of work (peer-reviewed journal articles, contributions to edited volumes, etc.) resulting in whole or in part from FWF-funded projects are supported by means of [an Open-Access Block Grant](#) provided in addition to the approved project budget.

Other forms of peer-reviewed publications (e.g., monographs, edited volumes or proceedings, databases and other web-based formats) are supported by the [Stand-Alone Publications programme](#).

IV. Acknowledgement

Principal investigators are required to acknowledge support from the FWF in every presentation and/or publication of research results. The following naming convention must be observed in all cases:
Austrian Science Fund (FWF): grant DOI.

V. Documentation

Open access activities are to be indicated in the final report to the FWF. Compliance with the FWF's Open Access Policy must be demonstrated by providing a persistent address where the full text of the publication can be accessed, read and downloaded. This address may either be an ID associated with a recognised service ([DOI](#), identifier of [PubMed Central](#), [ArXiv](#), [RePEc](#), [SSRN](#) or [Datacite](#) DOI) or another persistent address that is guaranteed to be resolvable for at least ten years.
